```

Emoji

All emojis supported by GitHub are supported, you can find a list of them under `Help ->`
`View Emojis`.

😄 👍

```
:smile: :+1:
```

KaTeX

KaTeX implements the LaTeX language, which is used for writing mathematical expressions among other things, read more about them here and here.

```
#### Inline

$e^{iπ} + 1 = 0$

#### Block

$$e^{iπ} + 1 = 0$$

#### Multi-line Block

$$
\begin{pmatrix}
    f(\alpha) & b \\
    a         & f(\beta)
\end{pmatrix}
$$

#### Code Block

```katex
e^{iπ} + 1 = 0
```
```

Inline

$$e^{i\pi} + 1 = 0$$

Block

$$e^{i\pi} + 1 = 0$$

Multi-line Block

$$
\begin{pmatrix}
    f(\alpha) & b \\
    a   & f(\beta)
\end{pmatrix}
$$

Code Block

$$e^{i\pi} + 1 = 0$$

MhChem

MhChem is a LaTeX language extension supported by KaTeX, it is used for writing chemical expressions, read its documentation here.

```
#### Inline

$\ce{ H2O }$

#### Block

$$\ce{ H2O }$$
```

Inline

$$\ce{H2O}$$

Block

$$\ce{H2O}$$

AsciiMath

AsciiMath is a language for writing mathematical expressions using only ASCII characters, read its documentation here.

```
#### Inline

&e = mc^2&

#### Block

&&e = mc^2&&

#### Code Block

```asciimath
e = mc^2
```
```

Inline

$$e = mc^2$$

Block

$$e = mc^2$$

Code Block

$$e = mc^2$$

Mermaid

Mermaid is a language for generating flowcharts and diagrams, read its documentation here.

```
```mermaid
graph LR
  Start --> End
```
```

Deep Linking

The following custom syntaxes are supported for linking to various things inside the app: attachments, notes, tags and search queries.

```
#### Attachment

`<markdown>` Tag

A custom `<markdown>` HTML tag is supported. Anything written inside it will be rendered as Markdown. This is particularly useful when you have to write some wrapper HTML but you still want to write Markdown inside it.

```
<details>
  <summary>Summary...</summary>
  <markdown>
- Embedded
  - _Markdown_
  </markdown>
</details>
```

▶ Summary...

HTML

HTML can be written inside Markdown. The following are some useful HTML tags that you might want to know for which there's no Markdown-specific syntax.

```
<!-- Comment -->
```

Abbreviation

```
#### Abbreviation

<abbr title="Mister">Mr.</abbr>

#### Center

<center>Center</center>
<p align="center">Center</p>

#### Description List

<dl>
 <dt>Mr.</dt>
 <dd>Mister</dd>
</dl>

#### Details

<details>
  <summary>Summary...</summary>
  Details...
</details>

#### Keyboard

<kbd>Ctrl+F5</kbd>

#### Mark

<mark>Text</mark>

#### Small

<small>Text</small>
```

Mr.
